Core process flow

- In this application, there will be 3 types of users (Admin, Publisher, End-user) Publisher will upload the softcopy of the book in PDF format only
  - During the upload, publisher needs to upload book with the search tag
  - By this search tag, search book will work
- Along with other details like Book Name, SKU#, Author Name, Description, etc
- During the upload, each page will be split into a separate file & stored in the DB. Like, if a book has 100 pages then, 100 files for each page will be stored in the DB
  - End-user will register to the portal & search for book
  - After getting the search results, user will check the contents of the book
  - Then search for pages like 10 -15 or so
  - Once done, aplication will prompt buy those pages to read
  - Here through the SQL query, application will search the DB with the particular page/s & fetch the results
  - User will get redirected to the paymant gateway & pay the said amount
  - That selected pages (10-15) will view to the user as a URL
  - User can't download those PDF
  - User can't share those PDF as free
  - If share to anyone, the application will be prompted to pay for those particulat pages
  - If a user paid for that particular page/s, then that will be available always to that particular user id & password
  - Even the publisher incative the book, then also those link still be available to that user for which he/she has been subscribed
  - An user with same user id & password, can't be logged in more than ONE (1) device
  - PDF document/s can't be downloadable
  - Admin panel has the option to check all the activities from the front end
